

### The **Minimal** Frame

Orama **ONE** offers a frameless transparency from floor to ceiling. This is achieved by the fully concealed track system.

### The **Invisible** Frame

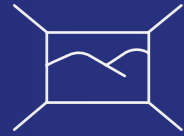

Orama **Z°** merges the outside with the inside seamlessly. The windows slide over a 1cm wide slot in the floor. The space between tracks is covered with the same flooring material, which creates a continuous space.

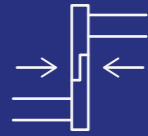

### The **Pivot** Frame

Orama **AXIS**, conceals more than one simple opening operation; the door swings around an asymmetrically located axis, creating a short-lasting anti-gravity moment. **AXIS** gently opens with a simple and effortless push.
